Git & GitHub — Session 1

Project preparation report — Hiba Ait Salah

1. Project overview

This website is a small HTML, CSS and JavaScript project for practicing Git and GitHub. It includes a simple page layout, a JavaScript status message and the supplied starter assets.

2. Files and ignore rules

The project includes index.html, style.css, app.js, a README, an assets folder, and this PDF. The .gitignore excludes local.env, ordinary .log files and tmp/ content. important.log is deliberately allowed.

3. Git operations performed during package preparation

A local Git repository was initialized. A feature branch was created to update the JavaScript status text, and that branch was merged back into main. These local operations were performed while preparing the package, not as evidence of Hiba personally executing Git commands.

4. Local repository evidence

```
Recent commits:
2750410 Improve website status message
046576c Merge status message improvement
51aa858 Create Session 1 starter project for Hiba

Local branches:
feature/status-message
* main

Working tree: clean
```

5. Remaining steps

Hiba should review the assignment instructions, check the project, publish it to her own GitHub repository, verify that the report and source files appear there, then submit her GitHub repository URL in the shared Excel sheet. These remote actions are not claimed as completed in this PDF.
